

Seafastening for Walney TP Structures

March 2015

LICENGINEERING A&S designed seafastening cradles for sea transport of large Transition Pieces (TP's) – part of the monopile foundations. The cradles were designed for transport below deck and on top of deck on the transport vessel.

The cradles were designed for transport below deck and on top of deck on the transport vessel. The cradles were designed for transverse strapping of the TP's and large bolted steel clamps secured the TP's against movement in the axial direction.
