

Offshore Supervision

As well as the standard inspection and QA/QC services, LIC can offer a complete client representation package including project management, welding engineering, and proactive resolution of technical issues. Our team of experienced experts have supervised sites all over the world and can help you in many aspects of an engineering project.

Supervision jobs have included:

- Riser installation
- Stack-up/integration test for subsea systems
- Jacket grouting operations
- Riser guard installation
- Buoy/anchor rectification
- Tie-in spool installations
- Subsea valve operations
- Replacement of subsea valve components
- Subsea wellhead completion installation
- Subsea acoustic transporter installation
- Offshore wind turbine installation
