

Pipeline Optimization for Marginal Fields Project for the Danish Energy Agency

With this project, LICENGINEERING A/S has developed a full-scale test system for simplified connection of bundle systems and flowlines.

The system was tested offshore in the waters outside Esbjerg.

Divers and tugboats were used during the tests.

Divers and tugboats were used during the tests. The results will be utilized in further design work, leading to new simplified pipeline installation methods with reduced requirements for diver assistance.
